

CN-LAB
TEST-1

Nitish N. Banakar
12-11-2020
18M18C8088

Topology

- 1) Set up the topology as shown
- 2) Assign IP address to each of the nodes and give gateway to each.
- 3) The two hubs are connected to switch as connecting device.
- 4) Select Simple PDU and click on PC0 (source) and PC5 (destination)

Observation:-

When the PDU is received from target node, it acknowledges after successful receiving.

- Address Resolution Protocol is used as it discovers the link layer address associated with network layer

Nitish

- DHCP service is used to simulate IP address ~~from~~ ~~In~~ the server
